

Soccer Live-Odds Market Catalog

API-Football and The Odds API

Catalog snapshot: 2026-06-22 | Scope: soccer pre-match and in-play market types

This document answers a capability question: which soccer odds market types might be fetched from either provider. It does not imply that every bookmaker quotes every market, league, fixture, region, or moment. Availability is event- and bookmaker-dependent and may also depend on subscription plan.

At a glance

API-Football pre-match	325 soccer-relevant labels (337 returned; 12 clear non-soccer contaminants separated)	Bet IDs and value ladders; many compound, interval, team, and player contracts.
API-Football live/in-play	266 labels	Separate live bet-ID namespace; IDs do not map to pre-match IDs.
The Odds API	47 unique documented soccer-relevant keys	Featured keys can be requested broadly; most additional/prop keys are event-specific.
Observed extension	player_fouls	Present in this repo's archived World Cup event responses but absent from the current public catalog page.

Source and method

API-Football data was queried from the provider's official **/odds/bets** and **/odds/live/bets** catalog endpoints using the configured project credential. The Odds API keys were extracted from its official Betting Markets page. The project implementation and archived responses were inspected only to identify the currently fetched subset and the observed undocumented player-fouls key.

Coverage Map

The catalogs overlap strongly on core outcomes but differ in depth. API-Football exposes a much broader sportsbook-native taxonomy, especially in-play. The Odds API offers a smaller normalized key set with useful player, corner, and card props.

Match result / qualification	1X2, double chance, DNB, handicaps, qualify/advance, method of victory	h2h, h2h_3_way, double_chance, draw_no_bet, spreads	Strong overlap; settlement rules can differ.
Goals and team goals	Totals, exact/range scores, team totals, odd/even, clean sheets	totals, alternate_totals, team_totals, alternate_team_totals	Exact contract and line must match.
Halves / intervals / sequences	Very broad: halves, 10/15-minute windows, next action, nth goal	H1/H2 moneyline, spreads, totals, team totals; BTTS H1	API-Football is substantially deeper.
BTTS and compounds	BTTS by half plus result/total/double-chance compounds	btts, btts_h1, halftime_fulltime	Do not infer compound prices from marginals.
Corners	Totals, team totals, 1X2, handicaps, races, nth/interval corner	corner totals, team totals, handicaps, corners_1x2	Both have direct useful contracts.
Cards / discipline	Cards/yellows/reds totals, team, handicap, 1X2, timing and player	card totals/handicap; player card/red-card	Definitions may be card points vs card counts.
Shots / shots on target	Team totals/comparisons and player shots/SoT	player_shots, player_shots_on_target	The Odds API docs list no team shot/SoT key.
Fouls / offsides / saves	Team totals, comparison, handicap, parity; player fouls; saves	No documented keys; player_fouls observed in archive	API-Football is the documented source.
Player attacking props	Scorers, shots, SoT, assists, score-or-assist, saves, tackles, passes	scorers, shots, SoT, assists	Coverage depends heavily on lineup and bookmaker.
Penalty shootout / extra time	Detailed live and pre-match families	No dedicated documented soccer keys	Keep regulation vs ET settlement explicit.
Outrights	Competition winner may appear via provider offerings	outrights, outright_lay	Not a single-match anchor.

What the bot fetches today

The production code requests The Odds API featured **h2h** and **totals**, then event-specific **alternate_spreads_cards**, **alternate_spreads_corners**, **alternate_totals_cards**, **alternate_totals_corners**, **btts**, **corners_1x2**, **player_shots_on_target**, **team_totals**. API-Football is currently used for match data and optional lineup enrichment, not as a live odds anchor. Therefore this report is a capability inventory, not a claim that the whole catalog is already integrated.

Archived research also requested **alternate_team_totals_corners** and **player_fouls**. The latter is omitted from the current public The Odds API market page, so it should be feature-detected per event/provider rather than assumed.

The Odds API: Complete Soccer-Relevant Key List

The public page says additional markets must be requested one event at a time through the event-odds endpoint. Soccer player props are currently described as available for EPL, Ligue 1, Bundesliga, Serie A, La Liga, and MLS, limited to US bookmakers. Generic and period keys below are included where they are soccer-applicable; actual event responses remain authoritative.

API-Football Pre-Match Bet Catalog

All 325 soccer-relevant provider labels returned by **/odds/bets** are below. IDs are provider identifiers, not stable semantic equivalences to The Odds API keys. Duplicate labels and cryptic labels such as RTG_H1 or RCARD are preserved verbatim because omitting or renaming them would make the list less auditable.

Integration Checklist

1. Discover availability from the event response; never assume a catalog entry is quoted.
2. Match the exact contract: period, team/player, threshold, handicap, three-way vs two-way, and regulation vs extra time.
3. Preserve bookmaker and update timestamps; reject stale or post-kickoff snapshots when building pre-match counterfactuals.
4. De-vig only coherent outcome sets from the same bookmaker and contract. Do not combine unrelated lines or derive compound prices from marginal markets.
5. Normalize team/player aliases carefully and retain the provider IDs/keys for auditability.
6. Feature-detect undocumented keys such as `player_fouls` and degrade to the model/neutral fallback when absent.

Bottom line

API-Football offers the broader soccer taxonomy, particularly for live match-state, timing, discipline, fouls, offsides, saves, shots, and sequence markets. The Odds API offers fewer normalized keys but strong bookmaker coverage for core prices, corners/cards, and selected player props. For this bot, the most immediately actionable additions are exact-contract markets that overlap SportsPredict questions and have adequate bookmaker depth; catalog size alone is not evidence of predictive value.
